

Enterprise Social Networking

Clearvale Enterprise is a cloud-based enterprise social networking solution that helps businesses engage with employees, customers and partners. Only Clearvale enables businesses to create separate social networks for each of these groups, but manage them together as a whole, creating a social enterprise ecosystem.

Clearvale Enterprise provides users with the ability to connect, build relationships, share ideas, create content, and learn from one another. But unlike consumer social networking sites, microblogging services, and the like, Clearvale Enterprise provides the ability to create robust, high-availability extranets, intranets, or portals and choose whether to provide them as open communities (as for customers or partners), as highly secure sites (as for employees, vendors, etc.) or both.

Clearvale Enterprise is based in the cloud, offering flexibility and agility, and doesn't require software installation. No need for multiple logins. No need for IT assistance and lengthy implementations. No more isolated silos. Just a productive, social enterprise ecosystem.

Creates a Platform of Engagement

Enterprises are using Clearvale to provide a platform of engagement – a virtual environment that connects and engages employees, customers, and partners in a social context such that they can collaborate effectively, share knowledge, solve problems faster, foster a culture of innovation, and boost business performance.

Accessible

Clearvale is based in the cloud, offering flexibility, agility and the ability to communicate and collaborate with colleagues, customers and partners, without requiring software installation.

Simple to Set Up and Use

Creating a network in Clearvale is easy, and the environment is architected to enable anyone to create intranets, extranets, and public-facing Web sites quickly and without having to rely on their IT departments.
